

Natural Green Frequently Asked Questions

Are you looking for a reseller?

Yes we are looking for resellers and regional distribution partners! If interested, kindly e-mail us a letter of interest to info@natural-green.ch

Are you looking for partners?

Yes we are looking for international and national partners. If interested to be a business partner, kindly e-mail us at info@natural-green.ch

Do you sell organic fertilizers?

Unfortunately, we do not sell organic fertilizers. Natural Green is a Natural Mineral Plant Strengthenener, Enhancer and Soil additive.

Do you sell natural mineral fertilizers? What kind?

Yes! Natural Green is a natural mineral fertilizer that acts as a plant strengthener, plant enhancer and soil additive.

What are the advantages, uses and effects of Natural Green?

Based on our study and research since 2007, these are the known advantages of Natural Green:

- Increases antioxidant potential
- Calcium reinforcement
- Water preservation
- Increase fruit firmness and storage capacity
- Improves natural resistance against plant diseases
- Promotes faster and stronger growth of roots and plants
- Improves vitality
- Improves photosynthesis performance
- Improves metabolic cell activity
- Increases levels of valuable substances and flavourings (e.g. vitamins, sugars, flavonoids, starch)
- Improves plant health specifically greater natural resistance to diseases and pests
- Improves stress resistance against cold and drought
- More efficient use of water as a result of improved stomata function
- Increases yield and better crop quality
- Natural Green processed nutrients are immediately available to the plants which is very essential for healthy growth
- Shortens growth periods of seedlings that leads to an earlier harvest
- Improves storage and transport capabilities (e.g. lettuce)

What are the different Natural Green products?

As of now, we have the following products available:

- Natural Green Classic - used for all kinds of crops and indoor plants
- Natural Green Seed Coating
- Aquasave Natural Soil Conditioner - used to increase the water shortage capacity.

What is the use of Natural Green Classic?

Natural Green Classic is a plant strengthener which can be used of all kinds of crops and plants.

What is the use of Natural Green Seed Coating?

Natural Green Seed Coating is used to prevent seeds and roots from diseases in occurring in ecological or integrated farming. Our product, ngSC – Seed Coating Universal, is exactly what you need.

What is the use of Aquasave Natural Soil Conditioner?

Aquasave Natural Soil Conditioner is used for increasing the water shortage capacity.

To what countries has Natural Green partnered with?

Since we started last 2007, we have partnered locally in Germany. Internationally we have expanded to Switzerland, Netherlands, Belgium, Spain, Austria, England, Denmark, Russia, India, Nepal, China, Kazakhstan, Kirgizstan, US, Canada, Georgia, Philippines, Thailand, New Zealand, Italy, Iran, UAE, Saudi Arabic and Kuwait.

When was Natural Green established?

In 2007, Natural Green was founded by Mr. Viktor Sukau and Dr. Goeasta Hahr in Germany. At present, the Natural Green headquarters is in Switzerland.

What is the mission and vision of Natural Green?

More and more people nowadays can access knowledge, technology and education. This changes the requirements and the habits of people and companies worldwide. Our world is becoming increasingly versatile.

The challenges resulting from these changes experienced by our companies are directly connected to the climate change, population growth and the shortage of resources. They have a significant influence on our food production and the increasing production of renewable raw materials!

With the continuous reduction of cultivation areas, the permanent population growth demands an increasingly efficient management of the soil. The climate change leads to a shift in the cultivation, growth and harvesting timeframes under consideration of the increasingly severe

extreme weather phenomena. Plants and crops must adapt and are increasingly exposed to stress through drought, floods, hail and storm damage. This means that we need a new way of thinking and new solutions, in order to be able to overcome the challenges of the future! With our new approach – Nature Helps Nature – we want to contribute to this new way of thinking!

This approach dates to the times of Dr Julius Hensel, who in 1894 published his book “Bread from Stones”. He was the first author to describe the effects of mineral rock on the creation of fertile soil and to point out how those findings could be used in the field of agriculture. In recent years, this approach was further developed by **Dr. Goesta Hahr and Mr. Viktor Sukau** and implemented in new project ideas and production processes.

So, here is what we do: We combine old knowledge, gained from nature itself, with our new findings and modern manufacturing processes to produce our natural green products.

Natural Green is an innovative company. Working under the motto "Nature Helps Nature", Natural Green produces plant strengtheners, fertilizers and soil additives on the basis of natural raw materials, in order to help people grow better, healthier plants without any chemistry and increase the yield potentials of various crops. Natural Green distributes their own products all over the world and intends to launch other new products based solely on pure mineral natural materials. Natural Green has the special formulant know-how for micronized and energetically enriched mineral products and has already developed several new formulants which can be used as soil additives or as a new generation of "plant strengtheners" and leaf fertilisers in various market segments in the agricultural sector as well as in the field of gardening, viticulture, fruit growing and forestry.

Based on the scientific foundation of plant nutrition and soil science, Natural Green has developed special production and formulant processes for its products. For this purpose, the knowledge gained about the millions of years of development of fertile soil and natural plant nutrition processes before the introduction of chemical products was used, in order to comprehend and optimise the natural processes of mineralisation of rock and organic substances through heat, frost, rain, water and wind erosion by means of ultra-modern and highly efficient mechanical micronisation technology. The formulants combined from various natural stones and organic natural materials consist of micronized and energetically charged nanoparticles. They contain plenty of nutrients which are essential for plant growth and are required for a best possible plant growth. The extensive formulation process ensures that the nutrient ions tied in the nanoparticles can be absorbed together with water from the plant roots and the plant parts growing above the ground level, so that they can have a maximum effect on the plant cell metabolism. As this production process also leads to an increase of the kinetic energy of nutrient ions at the same time, the ions are better suitable for reactions and thus more effective as chemically produced plant nutrient or rock flour. Therefore, natural green formulants do not simply imitate natural processes, but also optimise them.

Although Natural Green products are pure natural products, they are highly effective plant nutrient products which in their quality as soil or leaf fertilisers can increase and improve the

growth, yield, quality and health of many plants. They are sustainable, as they are formulated without any harmful chemical processes, and are intended to help create a healthy environment and safe and mild plant nutrition. Thus, they ensure healthy and safe nutrition for the animal kingdom as well as for people and make an essential contribution to ensuring healthy nutrition of the growing world population.

The spirit of technical innovation, creativity and responsibility to our environment based on scientific principles are the main features of the philosophy of Natural Green. This philosophy forms the stable foundation for a successful future development of the company, although a longer introduction phase is to be expected – many users have yet to discover the advantages of these new products and to start using them themselves. Helping nature by means of natural products – it is not only the employees of Natural Green who are working towards this goal, but also an increasing number of passionate practitioners and scientists in more and more countries. They are convinced that Natural Green's motto "Nature Helps Nature" is the right way to environmentally friendly plant production.

Who founded Natural Green? Who is the Natural Green CEO?

Natural Green was founded by Mr. Viktor Sukau. Natural Green's CEO is Mr. Thomas Duff and Mr. Viktor Sukau and the President is Mr. Thomas Duff.

Natural Green originated from?

In 2007, Natural Green was founded by Mr. Viktor Sukau in Germany. At present, the headquarters is in Switzerland.

Does Natural Green have a side effect(s)? If yes, what are those?

Based on our study and research since 2007, we are happy to inform the market that Natural Green has no known side effects.

What is the difference of Natural Green from other plant strengtheners?

Based on our study and research since 2007, the team is proud to say that Natural Green is different from other plant strengtheners because of the following known advantages:

- Increases antioxidant potential
- Calcium reinforcement
- Water preservation
- Increase fruit firmness and storage capacity
- Improves natural resistance against plant diseases
- Promotes faster and stronger growth of roots and plants
- Improves vitality
- Improves photosynthesis performance
- Improves metabolic cell activity
- Increases level of valuable substances and flavourings (e.g. vitamins, sugars, flavonoids,

- starch)
- Improves plant health specifically greater natural resistance to diseases and pests
 - Improves stress resistance against cold and drought
 - More efficient use of water as a result of improved stomata function
 - Increases yield and better crop quality
 - Natural Green processed nutrients are immediately available to the plants which is very essential for healthy growth
 - Shortens growth periods of seedlings that leads to an earlier harvest
 - Improves storage and transport capabilities (e.g. lettuce)
 -

Is Natural Green exclusively for crops? Or both for crops and indoor plants? What is the difference when used in both?

Natural Green can be used for both crops in the farm or for home/indoor and garden/outdoor plants.

What is the difference if Natural Green is used for both crops and indoor plants?

Based on our study and research since 2007, there is no known difference when Natural Green is used for crops and when used with indoor or outdoor plants.
